

Design Your Own Space Suit

Create your own space suit that could be used during a spacewalk on the Moon. Label the important design features and explain your reasoning.

Remember:

- Astronauts need to be able to communicate with each other and have a drink during the spacewalk.
- The Moon has no atmosphere so there is no oxygen to breathe.
- The Moon has an uneven surface so astronauts need to take care when walking.
- It is dangerous to look directly at the Sun so consider appropriate headwear.
