

Science Wk beginning 17.10.22

Task 1

The week we are looking at how animals adapt and survive in their environment. Look at the picture below, write down the environment the duck lives in and what advantageous (things that help it) characteristics it has to survive and flourish there.

Can you describe this duck's environment?
What characteristics help it to survive?

Task 2

The characteristics which helped the duck survive have been inherited. Do you remember what inherited means? Write a definition to explain what it means.

Task 3

Look at both environments below in turn. Research an animal that would live in each one and complete the sheet below for each one answering the questions carefully from what you have found about them.

Look at one of the Environment Posters. Can you describe the environment? Use books, CD ROMs and the internet to find out about an organism that lives in the kind of environment you have been looking at. Draw the organism and label some of its characteristics, giving reasons why they are advantageous.

Name of environment:

Describe the environment. What does it look like? Where in the world is it? What is the weather like? Is it wet/dry? Is it hot/cold? What distinctive features are there?

Draw an organism from the environment. Label some of its characteristics:

Describe the organism. How does it move around? How does it get food? How does it protect itself?
