

## Home Learning Week Commencing 16.11.20

### Maths:

This week, we will be looking at subtracting a 2-digit number from another 2-digit number crossing 10 and at adding 3 1-digit numbers together. As last week, please use <https://mathsbot.com/manipulatives/blocks> to show using tens and ones to solve the questions. I have attached some questions to the website page to work through - please encourage the children to talk about what they are doing and to explain their reasoning.

### English:

This week we are working on planning a short story with a beginning, middle and end. We will be using the character of Beegu and setting descriptions created last week to do this. I have attached a comic book planning template for the children to draw their story out. We will also be acting out our stories in groups - if you would like to film your child acting out their story and send it in, that would be lovely to see!

### History:

This week we are thinking about why animals were sent to space. I have attached some information to the website. Please talk this through with your child and talk about the kinds of qualities the animals would need to have to go to space. The activity is to create an advert encouraging animals to go to space - please think about persuasive writing and making the advert appealing to the animals.

### Science:

This week we will be thinking about choosing an appropriate material for an item. I have attached a table to the website. Discuss which of the properties each item would need and encourage your child to think about which material would fit those properties.
