

Science

In science this week we will be looking at how the circulatory system works in the human body.

Research the job roles of these key parts of that system and use your knowledge from our previous lesson to write a paragraph about each area:

- The heart
- The lungs
- The arteries and veins.

Can you create a board game that relates to the circulatory system? Have 3 question types: general circulatory system questions, the heart questions and the lungs questions. Make the shape of the board related to the human body itself. Write down the rules to your game.
